

RESEARCH PORTFOLIO

Mixed-methods research for AI, safety, and emerging technology.

I run rigorous quantitative and qualitative research across workplace AI, social VR, trust and safety, media effects, and online communities. I translate experiments, surveys, interviews, and content analysis into evidence teams can use for product, policy, and strategy decisions.

703

participants recruited for dissertation experiment; 685 valid responses analyzed.

685

valid respondents in a 2 x 4 x 2 online factorial experiment on workplace AI.

1,540

forum posts/comments analyzed for GenAI and game development research.

280+

interview and focus group participant records across AI, VR, games, streaming, and media.

223

global survey respondents across six continents/regions for social VR safety research.

181

newspaper articles coded for quantitative media-framing analysis.

RESEARCH METHODS

Quantitative

- Factorial experiments
- Survey design
- Structural equation modeling
- Cross-group comparison
- Reliability-based content coding

Qualitative

- Semi-structured interviews
- Focus groups
- Expert interviews
- Thematic and grounded analysis
- Cross-case synthesis

Translation

- Product and policy recommendations
- Design principles
- AI governance frameworks
- Trust and safety guidance
- Executive-readable findings

TECHNOLOGY RANGE

Workplace AI

Human-AI collaboration

Trust and safety

Social VR

Generative AI

Game development

AR training

Media effects

Online communities

SELECTED RESEARCH CASEWORK

AI WORK, EVALUATION, AND GOVERNANCE

Workplace AI evaluation and job security

Tested how AI design, worker presentation, partner type, and task type shape evaluation, credit, accountability, and job-security perceptions.

Evidence: 685 valid experiment respondents, 16 between-subjects conditions, 6 expert interviews.

- **Methods:** factorial experiment, SEM, interviews, survey measures.
- **Use cases:** AI governance, HR tech, workforce transformation, internal AI adoption.

TRUST, SAFETY, AND SOCIAL VR

Platform safety in embodied online spaces

Studied harassment, consent, user visibility, AI moderation, and AI companions in social VR.

Evidence: 223 global survey respondents, 39 moderation/consent interviews, 31 interviews with users from marginalized populations.

- **Methods:** surveys, interviews, thematic analysis, safety-design synthesis.
- **Use cases:** platform safety, gaming, online communities, AI-assisted moderation.

EMERGING TECH COMMUNITIES

Adoption, creator work, and collaboration

Mapped how people use new tools for collaboration, social support, streaming, creator work, and game development.

Evidence: 30 VR collaboration interviews, 29 marginalized population support interviews, 1,540 GenAI forum posts/comments.

- **Methods:** interviews, online community analysis, cross-case synthesis.
- **Use cases:** creator tools, community products, AI workflows, distributed collaboration.

MEDIA EFFECTS AND AUDIENCE INSIGHT

Risk, responsibility, belonging, and support

Analyzed how news, podcasts, and online communities shape interpretation, connection, and social support.

Evidence: 181 coded news articles, 18 focus group participants, 4 independent coders.

- **Methods:** quantitative content analysis, focus groups, survey intake.
- **Use cases:** communications research, content strategy, public trust, audience insight.

RESEARCH STRENGTHS

What I bring to large research teams

- Comfort with both large quantitative datasets and deep qualitative evidence.
- Experience researching sensitive topics: harassment, platform risk, workforce dynamics, safety, and labor.
- Ability to span technologies without losing methodological rigor.
- Clear communication for cross-functional partners and nonacademic audiences.

Best-fit roles

- Mixed-methods UX Researcher
- AI / Responsible AI Researcher
- Trust and Safety Researcher
- Human-AI Interaction Researcher
- Product, policy, or communications research roles requiring quant and qual range

SELECTED EVIDENCE LIBRARY

Workplace dynamics in human-centered AI integration

703 recruited, 685 valid responses, 2 x 4 x 2 experiment, SEM, and expert interviews.

AI professionals' accountability for AI bias mitigation

20 AI professionals across roles, organizations, and industries.

Practitioner perspectives on AI design and development

Eight AI practitioners interviewed on design decisions and workplace dynamics.

AI-based moderation for harassment in social VR

39 interviews on AI moderation expectations in immersive spaces.

AI companions as harassment mitigation in social VR

20 interviews on AI companions as safety support in social VR.

Generative AI in nonprofit indie game development

1,540 posts/comments analyzed from online creative communities.

User visibility and harassment in social VR

223 social VR users across six continents/regions.

Preventing interpersonal harm in social VR through consent

39 user interviews translated into consent-oriented design implications.

Marginalized users managing harassment risks in social VR

31 social VR users from marginalized populations interviewed on risk, visibility, and mitigation.

Everyday collaboration in social VR

30 interviews on embodiment, co-presence, and collaboration.

Social support for marginalized populations in social VR

29 interviews across countries and cultures on belonging and social support.

Newspaper framing of COVID-19 public health disparities

181 articles coded with a four-coder reliability workflow.

True crime podcast fan communities

Introductory survey and focus groups with 18 participants.

TitleIX: mobile augmented reality bystander intervention training

AR training prototype for campus bystander intervention.
