

UX & HCI PORTFOLIO

Human-centered design for complex, high-stakes technology.

I design, evaluate, and communicate user experiences for dashboards, mobile training, immersive environments, community tools, and safety workflows. My work connects HCI research depth with practical interaction design.

6

UX/HCI projects across dashboards, AR, VR, mobile, community, and creator tools.

4

interactive contexts: decision support, safety training, immersive spaces, and social systems.

3

prototype-heavy formats: mobile app, AR experience, and VR interaction flows.

1

CHI-recognized transformative application for campus safety training.

DESIGN METHODS

Discovery

- User interviews
- Stakeholder conversations
- Workflow and task analysis
- Safety and trust considerations

Design

- Interaction flows
- Mobile-first product structure
- Dashboard information architecture
- AR/VR scenario design

Evaluation

- Usability testing
- Prototype feedback synthesis
- Cognitive load review
- Design recommendations

TECHNOLOGY AND PRODUCT RANGE

Dashboard UX

Decision support

Trust and safety

Mobile UX

AR training

VR interaction design

Creator tools

Community platforms

SELECTED UX/HCI PROJECTS

DASHBOARD UX | DECISION SUPPORT

Navy Squadron Readiness Dashboards

Redesigned readiness dashboard concepts for high-stakes assessment contexts where officers needed clearer status signals, responsibility boundaries, and reduced cognitive load.

- **Design focus:** information hierarchy, trust calibration, review workflows.
- **Outcome:** published insights on shared responsibility in high-stakes decision making.

TRUST & SAFETY | VIRTUAL SPACES

Moderator Workflows for Virtual Communities

Designed moderation concepts for immersive community spaces, focusing on transparency, escalation, user safety, and preserving the flow of social interaction.

- **Design focus:** escalation paths, feedback loops, user-facing transparency.
- **Outcome:** informed moderation best practices for emerging platform contexts.

AR | MOBILE TRAINING

Interactive Bystander Awareness Training

Designed a mobile, geolocation-enabled AR training experience that placed users in interactive scenarios and helped them practice intervention strategies.

- **Design focus:** situated learning, scenario flow, consequence feedback.
- **Outcome:** recognized at CHI 2023 for outstanding transformative application.

IMMERSIVE UX | SAFETY MECHANICS

VR Boundary and Consent Mechanics

Designed and evaluated VR-native interaction prompts for preventing interpersonal harm while keeping immersive experiences clear, embodied, and usable.

- **Design focus:** timing, user control, boundary setting, continuity.
- **Outcome:** published guidance for consent-oriented immersive spaces.

VR | CREATOR TOOLS

VR Copyright and Creator Attribution System

Designed a VR concept for artists to register, display, and protect digital creations in immersive environments using verifiable ownership cues.

- **Design focus:** artist workflows, verification cues, display and discovery.
- **Outcome:** user-tested with artists to identify trust and value signals.

MOBILE UX | COMMUNITY PLATFORM

Mentorship and Community Platform for Computing Students

Designed a mobile-first platform to help underrepresented computing students find mentors, events, opportunities, and peer support.

- **Design focus:** onboarding, event discovery, mentor matching, community trust.
- **Outcome:** early user feedback shaped community-support design recommendations.

ARTIFACTS AND STRENGTHS

Experience flows

Scenario paths, intervention points, moderation flows, and user journeys.

Prototype concepts

Mobile, dashboard, AR, and VR concepts ready for stakeholder feedback.

Research synthesis

Findings translated into design principles, product requirements, and risk notes.

Decision guidance

Recommendations that connect user needs to implementation and policy constraints.

WHAT I BRING TO UX AND HCI TEAMS

Design judgment

- Comfort with complex, high-stakes workflows.
- Ability to design for safety, clarity, and decision quality.
- Experience translating research into usable interaction concepts.

Cross-functional fit

- Clear communication for product, policy, research, and engineering partners.
- Flexible across dashboards, mobile products, AR/VR, and community systems.
- Strong fit for UX research, product design research, and HCI roles.
